Earth's Resources

Searching for minerals

Crops

Fish

Cattle

Allah Almighty has given us many gifts, of which Earth is the most important one. We use land for farming (growing crops) and establishing gardens. We get eatables from farming and gardening. We raise our cattle on this land from where we get milk and meat. On this earth we have big rivers, lakes, seas. We get water to drink and fish to eat from them. There are many things buried in the Earth. These include gold, silver, salt, iron, coal, gas and oil. These are called minerals. Iron is used to make different types of machines. These machines are run on gas and oil.

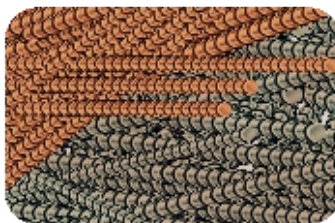

We get wood from trees.

Different things are made from wood.

Iron is found under the Earth as iron ore.

We make different things from iron.

Soil

Bricks and houses are made of soil. Pots are also made from soil.

EXERCISE

1. Answer the following questions:

- (i) Name some minerals.
- (ii) Explain benefits of animals.
- (iii) Which things are prepared from wood?
- (iv) Name a few things made of iron in your home.
